

ReTac® ChalkMate™

Capture and Create with ReTac® ChalkMate™

*Our 5 mil (125µ) durable PVC film has a traditional black chalkboard finish that can be used with standard chalk or liquid chalk markers (water required for removal).
It can be installed on most smooth surfaces.*

It utilizes ReTac® ultra removable adhesive technology to create impromptu chalkboard walls that are easy to apply, re-position and remove without surface damage. A second version is available that features a permanent, pressure sensitive acrylic adhesive, making it ideal for fixture applications. Both versions can also be used to make unique, custom chalkboard decals from die cut shapes or designs.

ReTac® ChalkMate™ is compatible with UV printers. Available in widths up to 61" (1549mm).
