

ViziPrint® Illuminate

View window graphics with clarity, day or night

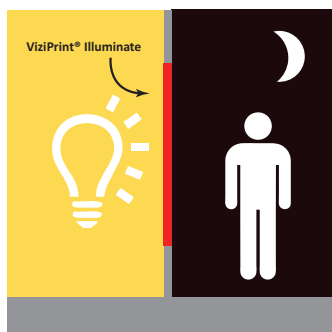

DAY VISIBILITY

ViziPrint® Illuminate is a 4 mil (100μ) high quality, translucent matte PET film that uses a mechanical bond to adhere graphics to glass and other smooth, flat surfaces. Thanks to its proprietary adhesion technology, no adhesive residue is left behind during graphic removal.

The film is very durable and does not require overlamination for graphics. Additionally, its bright white base color and ability to diffuse light creates brighter, more vivid window images that have a wider color gamut.

NIGHT VISIBILITY

ViziPrint® Illuminate is reverse printable, allowing for indoor and outdoor visibility of window graphics. It is ideal for window advertisements viewed during the day in direct sunlight or illuminated at night by store lighting. It can also be used for privacy and decorative glass applications as well as backlit displays.

ViziPrint® Illuminate is compatible with UV and latex printers. Available in widths up to 60" (1524mm).
