ViziPrint® Air Egress Makes Window Graphics Easy!

**High quality graphics
that anyone can install.**

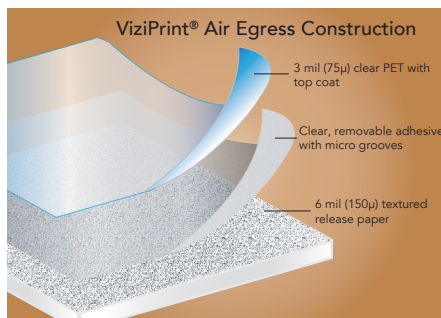

Installing a graphic printed on ViziPrint® Air Egress is easy. Professional installers are not required; anyone can do it!

Simply fold back a portion of the release liner, position the graphic, and gradually pull the release liner away as the graphic is smoothed from top to bottom to remove any air.

ViziPrint® Air Egress is a 3 mil (75µ) printable clear PET film with a unique removable adhesive that can be easily applied without water to glass, acrylic and other non-porous surfaces. Its specially designed, air egress release liner imparts micro grooves in the adhesive, allowing for easy, bubble-free application with a felt pad or felt-covered squeegee.

Unlike typical cling products, ViziPrint® Air Egress is very durable and does not wrinkle. Additionally, it can be re-positioned within 24 hours of initial installation.

Creating high quality graphics for retail storefronts, POP displays and backlit displays is effortless with ViziPrint® Air Egress. It is ideal for graphic installations at multiple locations or quick graphic applications, like posting menus to restaurant windows.

ViziPrint® Air Egress is compatible with UV and latex printers. Available in widths up to 54" (1372mm).
